

API Changes in Structure 1.5

1. Major API Release

Structure 1.5 comes with a set of API updates. The major changes are in the API for JIRA 5 compatible version.

JIRA Version	New API Version
4.3.x	4.0.2
4.4.x	4.0.3
5.0.x and later	5.0.0

See [Structure API Versions](#) for full version information and downloads.

2. Incompatible Changes

The only incompatible change in API 5.0.0 is that `StructureSynchronizerModuleDescriptor` class now extends a different base class. Theoretically this can break compatibility, but it's highly unlikely.

3. Compatible Changes

3.1. Utility Updates

`JiraFunc` class now contains more functions for operating on JIRA entities.
