Uninstalling and Reinstalling Structure

Uninstalling Structure

You can uninstall Structure from Plugin Manager the same way you uninstall other plugins. You can also manually remove structure JAR from `plugins /installed-plugins` directory when JIRA is not running.

When you uninstall Structure plugin, Structure data is **not removed**. It remains in the JIRA's database.

Reinstalling Structure

It is perfectly safe to uninstall Structure plugin, then install it back again. (This happens, for example, when you upgrade to a newer version.)

All Structure data will be there unless you manually remove it.
