

How to import tests from mind-map to Testy?

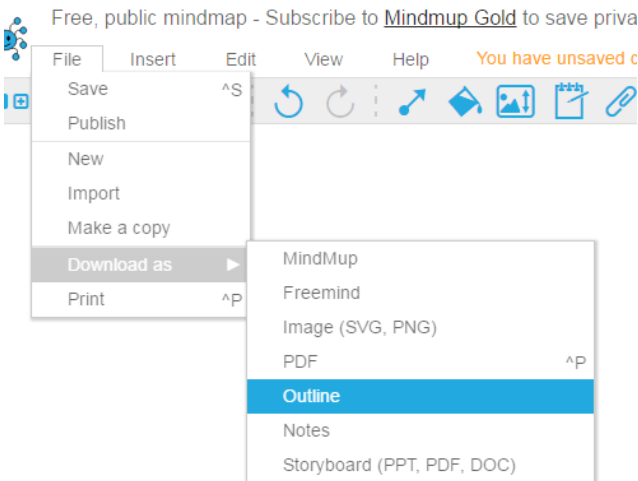

If your mind-mapping tool has export to a **text file with tab-intended format**, you can import it to Structure and use as tests in Structure.Testy

Step-by-step instructions for [mindmup](#) service:

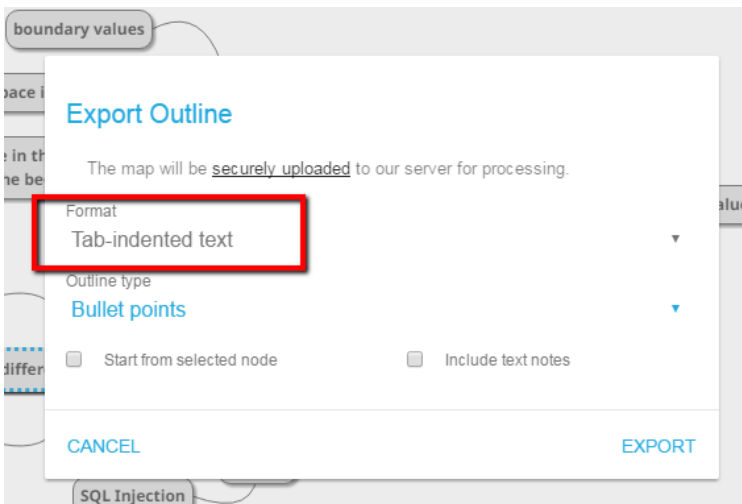

1. Create you beautiful map

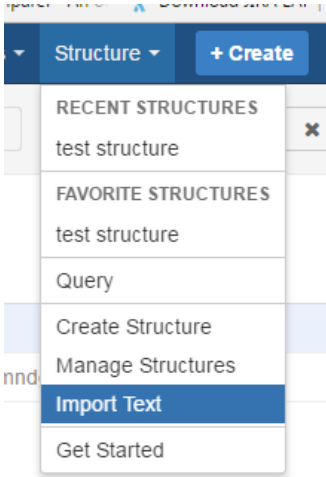

2. Export it into text file via File Download as Outline

3. Choose Tab-intended format and click Export, download file with results

4. Install **Structure Text Import plugin** into your JIRA via Administration Manage add-ons page (note, it is unsupported): [structure-text-import-0.2.jar](#)
5. Go to Structure menu, select Import text

6. Your text will be pasted as issues to Structure, so you need to define several parameters:

- Define Structure (create new Structure before importing if needed),
- Project for new created issues
- Issue type (perhaps you have special Test type, or just use the regular one)
- Check "Use folders for parent items" checkbox if you want to create parent items as folders
- Paste data from the file downloaded in step 3 into Imported Text field

Structure Text Import

Structure* test structure

Project* demo
Select a project for the imported issues

Issue Type* Task
Select an issue type for the imported issues

Options Use folders for parent items
 Decode Checklist comments

Imported Text*
tests for field
 negative tests
 boundary values
 empty
 space
 UI tests
 positive tests
 boundary values
 space in the middle
 space in the end on in the beginning

Import Cancel

7. Tests will be created after clicking Import,

test structure ▾
