

# Saving and Sharing Views

When you [add](#), [remove](#) or [rearrange columns](#), you are making changes to the currently-selected view. The view will now be marked with a blue asterisk, denoting that it has been modified from its original version.

The screenshot shows a table with columns for 'Key', 'Summary', 'Progress', and 'Pr'. The table contains several rows of tasks, including 'Epic 1', 'Story 1', 'Sub-task 1.1', 'sub-task 2', 'Story 2', 'Sub-task 2.1', and 'Sub-task 2.2'. A dropdown menu for 'Basic view' is open, showing options like 'My Custom View', 'Search View', and 'Basic view \*'. The 'Basic view \*' option is highlighted, indicating it is the current view.

These changes are stored locally and only visible to you. Anyone else using that same view will continue to see it in its original state, without your changes.

## Saving View Adjustments

To make changes permanent and push them to other people using the same view, you need to save a new version of the view. To do so, open the Views menu and click the **Save** link. You can also select **Save As** to create a new view with the current changes, without affecting the original view.

The screenshot shows a dropdown menu for 'My Custom View \*'. The menu is open, displaying options like 'Save', 'Save As', and 'Revert'. The 'Save' and 'Save As' buttons are highlighted with a red box, indicating they are the focus of the action.

To save changes to an existing view, you need to have *Update* access level for that view (see [View Sharing and Permissions](#)). If you do not have permissions to change the view, you can still create a new view based on your modifications with the **Save As** link.

If you need to remove your adjustments and return to the original view as it is stored on the server, click the **Revert** link.

## Sharing a View

A view has a set of permissions, just like a structure. When you create a view with the **Save As** link, you can select whether the view is **public** or **private**.

- If the **Make Public** box is checked, everyone can locate and use the view.
- If the **Make Public** box is unchecked, only you can locate and use the view.

The screenshot shows a dropdown menu for 'Basic view \*'. The menu is open, displaying options like 'Make Default for this Structure', 'Make Public', and 'Brand New View'. The 'Make Public' checkbox is checked and highlighted with a red box, indicating it is the focus of the action.

After you save the new view, you can specify exactly which users can use, update and manage the view. See [View Sharing and Permissions](#) for details.
