Creating Your First Structure

The first time you open Structure, you'll be presented with a blank panel. To get started, open the Structure Selector menu or click Select or Create.

From the Structure Selector menu, click Create Structure.

This will open the Structure Details dialogue. Give your new structure a name and (optionally) add a description. When you're finished, click Create.

Next Steps

When the structure opens, it will be completely empty. In the next sections, we'll show you how to add and organize issues to a structure, using the following methods:

- **Building a Structure with the Agile Hierarchy Preset** - the easiest way to build a structure
- **Building a Structure with Automation** - the most powerful way to build a structure
- **Building a Structure Manually** - the most flexible way to build a structure
