

# Child Issues for Portfolio Extender

If you have the Portfolio for Jira add-on installed, the Child Issues (Portfolio) Extender allows you to pull in child issues using Portfolio's Parent Link field.

## Customize Your Extender

Each Child Issues (Portfolio) Extender can be customized to create exactly the hierarchy you need.

You can customize:

**Extend Levels** - Allows you to select which levels in the hierarchy the extender should be applied to:

- *All levels up to 10* (default) - The extender will be applied to the first 10 levels of the hierarchy, starting from the level where the extender itself is located.
- *All levels* - The extender will be applied to the current level and all its descendants.
- *Current level only* - The extender will only be applied to the same level in the hierarchy as the extender itself.
- *Manual levels range* - You can specify which levels the extender is applied to.

See [Generator Scope](#) to learn more about customizing levels.

**Allow changes via Structure** - If this option is checked, the Portfolio parent links will be updated as you move issues in your structure.
