Selecting Structure-Enabled Projects

Structure can be enabled for any selection of the JIRA projects, or for none of them. (In the latter case noone can use Structure.)

⚠ By default, Structure is not enabled for any project. To start working or evaluating Structure, enable it for at least one project.

To select which projects are enabled for Structure:

1. Navigate to **Administration | Structure | Configuration**.
2. Click **Enable/Disable Structure in Projects**.
3. Select whether Structure should be available for **all projects** or for **selected projects**.
4. In the latter case, change the projects list in the **Selected Projects** list by selecting one or more projects and using **Enable** and **Disable** buttons.
5. Click **Apply** when done.
6. In case you have disabled some projects that are already used in a structure (a structure contains issues from that project), you'll be given a warning. You can opt to **Proceed with Changes** or cancel.
   a. If you proceed and disable a project that has issues in some structures, those structures will appear to the users without those issues.
   b. If you later enable that project back - the issues will reappear where they were (all structure changes taken into account).

✓ Which projects are enabled for the Structure affects Who Has Access to the Structure
