

Changing Permission to Create New Structures

By default, any logged-in user with [access to Structure](#) can create new structures of their own. However, you can restrict this ability to one or more user groups.

To select who can create new structures:

1. Navigate to **Administration | Structure | Configuration**.
2. Click **Select Who Can Create Structures**.
3. Select whether new structures can be created by **all Structure users** or by **selected user groups**.
4. In the latter case, change the **Selected Groups** list by selecting one or more user groups and using **Add** and **Remove** buttons.
5. Click **Apply** when done.

The user also needs [general access to Structure](#) to be able to create new structures.

Users who have *JIRA Administrators* global permission are always allowed to create new structures.

Structure plugin maintains a cache of users permissions with regards to each structure. In most cases, the cache is recalculated automatically, but in some cases Structure plugin may miss a change in a user's groups or roles. The result could be that the changed permissions take effect several minutes later (but only with regards to [Structure Permissions](#)). A user can force the cache to be recalculated by doing **hard refresh** from the browser. Typically, it's done by holding **Ctrl** or **Shift** or both and clicking the **Refresh** button.
