# **Structure Developer's Guide**

#### Structure for Developers

Structure Plugin contains APIs that allow you to access the hierarchical lists of issues from other plugins and applications. Here are the typical use cases:

### **Custom Development**

You customize JIRA for your customer or employer, and you need to integrate Structure with some other in-house system – see section about integrating plugins and Java API reference.

### Plugin Integration

You have your own great JIRA plugin, or plan to create one, and you'd like to use the issue hierarchy provided by Structure – see Accessing Structure from Your Plugin.

## **Extending Structure**

You'd like to extend Structure, adding functionality to the plugin itself – read documentation about extending Structure functionality with additional plugins. (You can also extend the functionality of the Structure plugin itself.)

#### Remote Access

You need to get or change issue hierarchy remotely from some automated scripts or a client application – read about accessing structure data remotely and Structure REST API.
