

Structure Widget Overview

The screenshot displays the JIRA Structure widget for the 'HyperDrive Project'. The interface includes a top navigation bar with 'Dashboards', 'Projects', 'Issues', 'Agile', and 'Structure' tabs. The 'Structure' tab is active, showing a hierarchical list of issues. The issues are organized into a tree structure, with sub-issues indented under their parent issues. The table columns include 'Key', 'Summary', 'Progress', 'TP', and 'Σ Original Estimate'. The 'Progress' column shows progress bars for each issue. The 'TP' column shows the type of issue (e.g., 'Task', 'Story'). The 'Σ Original Estimate' column shows the original estimate in weeks (e.g., '1w').

Annotations on the screenshot include:

- Current structure**: Points to the 'HyperDrive Project' header.
- Toolbar**: Points to the toolbar above the table.
- Configurable columns**: Points to the 'Progress' column header.
- Issue operations drop-down**: Points to the gear icon in the right margin.
- Drag and drop handle**: Points to the vertical line on the left side of the table.
- Sub-issues are indented**: Points to the indentation of sub-issues under their parent issues.
- Current view**: Points to the 'HyperDrive Project Estimates' header.
- Get help and send feedback**: Points to the 'Info' link in the bottom right corner.

Structure widget is a grid with adjustable columns that displays the issues as a hierarchical list. Structure widget is displayed on the [Structure Board](#), [Issue Page](#) and in [other places in JIRA](#).

Structure lets you navigate the hierarchy and search for specific issues.

Besides showing the Structure and allowing to navigate it, structure widget is the primary tool to change structure by rearranging issues in the hierarchy or using JIRA actions to work with every issue.
