

Distribution

Distribution is a visual representation of issues classification. The issues in distribution are shared among one or two axes of different parameters.

Using distributions you can break down issues by status, assignee or other attribute. JIRA Client creates and updates a list of sub-queries for each value of the attribute.

The screenshot shows the JIRA Client interface with the 'Tabular distribution' view selected. The 'User Queries' section is expanded, showing 'All Open Issues' and 'By Priority'. The 'By Priority' query is selected, showing a list of priorities: Priority not set, Blocker (1), Critical (20), Major (680), Minor (50), and Trivial (3). The 'Project' dropdown is set to 'None', and the 'Affects Version' dropdown is set to 'None'. The table below shows the distribution of issues by project and priority.

Project	Priority	Count
CS	None	Σ
Deskzilla 1.x	3	3
Infrastructure	1	1
JIRA Client 1.x	1	1
Personal	1	1
Platform 1.x	10	10
Platform 2.0	4	4
Σ	20	20

Annotations:

- Tabular distribution is selected
- Distribution by priority
- Tabular distribution by project and priority
