

Widget Extension Module

Widget extension module lets you add Javascript and CSS resources to the Structure widget. Your extensions will be loaded on all [pages](#) where the widget is shown. You can use the [Structure JavaScript API](#) and the Atlassian APIs in you JavaScript extensions.

Widget extension example

```
<web-resource key="wr-sbcolumn" name="web-resource:Status Bar Column">
  <resource type="download" name="sbcolumn.js" location="js/sbcolumn/sbcolumn.js"/>
</web-resource>

<structure-widget-extension key="we-sbcolumn" name="widget-extension:Status Bar Column">
  <web-resource>com.almworks.jira.structure.sbcolumn:wr-sbcolumn</web-resource>
</structure-widget-extension>
```

Element	Description
structure-widget-extension	The module descriptor.
structure-widget-extension/@key	The unique identifier of the plugin module. Required.
structure-widget-extension/@name	The human-readable name of the plugin module.
structure-widget-extension/web-resource	The complete key of the web resource plugin module containing the Javascript and/or CSS for the extension. You can have multiple <code>web-resource</code> elements in the extension declaration, thus grouping several web resources in a single widget extension.
