

Issue Data Provider Module

Issue data provider module lets you register data providers for the Structure widget columns.

Issue data provider example

```
<structure-issue-data-provider key="idp-sbcolumn" name="issue-data:Status Bar Column Provider"
                                class="com.almworks.jira.structure.sbcolumn.StatusBarDataProvider"/>
```

Element	Description
structure-issue-data-provider	The module descriptor.
structure-issue-data-provider/@key	The unique identifier of the plugin module. Required.
structure-issue-data-provider /@name	The human-readable name of the plugin module.
structure-issue-data-provider /@class	The class that implements the data provider. Must implement IssueDataProvider . Required.
