

Structure JavaScript API Reference

Structure's JavaScript API provides ways to extend the client-side functionality of the Structure plugin.

JavaScript API Functions

This page lists static functions exposed by the Structure API.

JavaScript API Classes

Structure Javascript API provides a number of classes to be used as base for your own column type implementations. This should be done using `subClass()` method.

- [Column Class](#) — A subclass of Column class represents column objects of a specific type.
- [ColumnConfigurator Class](#) — ColumnConfigurator class encapsulates everything related to column type configuration.
- [ColumnOption Class](#) — ColumnOption class represents a single column configuration parameter.
- [ColumnType Class](#) — ColumnType class represents column type.
