

Installation

Important

Structure.Testy is an extension for [Structure by Tempo](#). It is not a standalone add-on and will not work unless Structure is installed on your Jira instance.

To install Structure.Testy:

1. Make sure Structure by Tempo is installed.
2. Download Structure.Testy from the [Atlassian Marketplace](#) or our [Download page](#). (Structure for Jira is available in both places too!)
3. Install Structure.Testy on your Jira instance.

Once installed, Structure.Testy will be available to all users who have access to Structure.
