

Installing Structure

Structure is installed like the most other plugins.

1. Before installing Structure in production, make sure your JIRA meets [Memory Guidelines](#).
2. Open Plugin Manager, search for "Structure" by ALM Works on the Atlassian Marketplace and install from there.

Alternatively, you can download the plugin JAR manually from [download page](#) and either place it into *plugins/installed-plugins* subdirectory under your JIRA home (then restart JIRA) or use "Upload Plugin" link in the Plugin Manager.

3. Press **Get Started** button to finish the installation by [installing a license key](#) and [selecting Structure-enabled projects](#).

Congratulations! You can now spread the word and help users get started with Structure – consider sharing a link to [Structure 101](#) page.

If Structure Plugin Remains Disabled

It is possible that after you install Structure or enable it from the Plugin Manager, the plugin remains disabled. An error may or may not be shown. If you refresh Plugin Manager page within 5-10 seconds and Structure is disabled, you've got this problem.

See [Structure plugin won't start](#) article for possible causes and solutions.
