

Search

JIRA Client offers multiple ways to find the issues you are interested in. After you have installed and started it, you can use default [queries](#) located in [Navigation Area](#), and you can create your own using:

- context-based text search in the search field on the top of [Main window](#),
- ID search by issue key or URL in the search bar on the top of the Main window,
- "In-results" search by pressing **Ctrl+Shift+F** (**+** **+** **F**) in [Issues table](#),
- [Distributions](#).
