Dealing with Weird UI Behavior on Linux

Environment
The JIRA Client 1.5.3 with bundled JRE version 1.6.0_13.

Platform:

- xorg-x11 1.5.2
- Linux 2.6.27.25 x86-32
- ratpoison 1.4.5 window manager

Problem	Solution
JIRA Client does not run at full screen size in a window manager.	Switch to the unbundled JRE version of JIRA Client and move a system to 1.6.0_15 JRE.
New Issue dialog fields are blank. Pointer is dislocated. JIRA Client window is not maximized.	The reason for these problems is that Motif libraries are not installed on the system. To do so, set `AWT_TOOLKIT=MToolkit` in the environment and install Lesstif.
