

Structure.Testy User's Guide

Structure.Testy is a lightweight testing extension for [Structure](#). It allows you to create and maintain test checklists simply by adding a test run column to any structure. By taking advantage of Structure's ability to manage hierarchical lists, you can build custom test sheets to quickly mark and view test step results in separate columns.

Testy Demo Structure

Q1 check

Q2 check

Key	Summary	TP	Assignee
	Rides tests		
	Rollercoaster		
	Brakes System		
QA-13	Check the wheels for cracks		Unassigned
QA-12	Check the heating dissipation		Unassigned
QA-1	Check braking power		Jack Brown
QA-11	Check the brake pads wear		Unassigned
QA-10	Check the emergency brakes		Unassigned
QA-9	Check the brake power		Unassigned

Structure by Tempo must be installed on your Jira instance to use Structure.Testy.
