1. Patch Release

This is a patch release based on version 2.9. It fixes a critical issue related to issue creation and copying, and several smaller issues.

Upgrade is recommended for all customers who have active maintenance subscription.

1.1. Issue Creation Fix

The following critical issue has been fixed:

- HJ-1980 Resolved date is set when creating an issue in "clone" mode in the Structure widget

The issue affected only JIRA 6.3+ users. We have also fixed a similar problem with issues cloned while copying a structure.

1.2. Other Fixes

A number of less prominent issues have also been fixed, among them a few JavaScript errors in the Structure widget, and a problem which prevented saving changes to structure details in certain cases.

Our public JIRA contains the complete list of issues resolved in version 2.9.1.

2. Supported JIRA Versions

Structure 2.9.1 supports JIRA versions 6.1 – 6.3.x.

3. Installation and Upgrade

Installation and upgrade are simple and done in the same way as for most other plugins. Please see Structure 2.9 Release Notes for details.
