User's Guide

Structure.Pages is an extension for Structure that lets you create, manage and organize Confluence pages alongside Jira issues inside Structure.

Once you connect your Jira and Confluence with Application Links and configure Structure.Pages, you'll be able work with pages from Confluence in a similar way you work with issues:

- Find pages that exist in your Confluence using text search or CQL and add them to your structure
- View and edit pages right from the Structure interface in the details panel
- Create new pages right inside the structure
- Organize pages into a hierarchy within a structure manually or automatically
- Automatically pull in Confluence pages linked to issues in your structure

Learn to use Structure.Pages

- Adding Existing Confluence Pages to a Structure
- Viewing and Editing Confluence Pages in Structure
- Creating New Confluence Pages in Structure
- Automation for Structure.Pages

Install Structure.Pages
