

Quick Action Lookup

You can use a special keyboard combination – **s,q** – to pull up the "Action Lookup" input box. In that input box you can start typing what you need to do and it will suggest available "actions" that match the description.

The screenshot shows the top toolbar of the Kanban board with various icons for adding, moving, deleting, and automating tasks. Below the toolbar, the 'kanbans' tab is selected. A search bar is active with the text 'expl' entered. A dropdown menu is open, displaying several options: 'Export to Excel', 'Expand node', 'Expand all', 'Expand next level', 'Expand 1 level', and 'Expand 2 levels'. The 'Expand all' option is highlighted.

It also shows keyboard shortcut associated with the action.
