

Cannot Create an Issue With +Next Issue (+Sub-Issue) Because of the Required Fields

Question

I have a number of fields required for new issues. When I try to use Structure's **+Next Issue** or **+Sub-Issue** button, the creation of the issue fails, because the values of the required fields were not provided.

Answer

There are two ways to create new issues when additional fields are required:

1. Switch to the Create Issue Dialog

At the bottom of the Add Issue panel, click the Switch to Dialog link to access additional fields. See [Creating New Issues: Create Issues Using the "Create Issue" Dialog](#) for more information.

2. Add the Required Field to the View

You can enter additional fields when creating a new issue, as long as the field is part of the current view. See [Creating New Issues: Editing Other Fields During Creation](#) for more information.

If the initial creation of an issue has failed, you don't have to lose the entered data. Just add the required fields and double-click on the value you need to edit, or click the **Edit** button in the toolbar. You can change the values of the new issue and try to create it again.
