Changing Permission to Access Automation

By default, any user with Edit Generators access level for a structure can add and configure generators. You can restrict this ability based on user groups and/or project roles.

To select who can edit generators:

1. Navigate to **Administration | Structure | Configuration**.
2. Click **Select Who Can Access Automation**.
3. Select whether generators can be changed by **Anyone with Edit Generators permission** or by **Users in selected groups/roles**.
4. In the latter case, change the **selected groups/roles** list by selecting the second radio button and use the **Add Group/Role** section to add one or more required user groups or project roles:
   a. Use the drop-down selectors to choose either the **Group** or **Project** option.
   b. Choose the required group name or project/role combination. (*Note:* If **project** is set to "Any", this means the user should be in the specified role for any of the structure-enabled projects.)
   c. Press the **Add** button to add it to the list.
5. You can remove a permission option by clicking the trash can icon on the right of the option.
6. Click **Apply** when done or **Cancel** to dismiss your changes.

> In order to add/change generators for an individual structure, a user also has to have *Edit Generators* access for that structure.

> Users who have *Jira Administrators* global permission are always allowed to change generators.
