View Sharing and Permissions

Like structures, views can be shared with different levels of access for each group of users.

There are four levels of access to a view:

None	The view is not visible nor usable by the user.
Use	Read-only access: the user can use the view, but cannot modify it.
Update	The user can use the view, and also save view adjustments as the new version of the view. The user cannot modify view name or sharing permissions.
Manage	The user can change any of the view's properties and also can delete it.

View owner and Jira administrators always have Manage access to a view.

People who have only **Use** permission for a view still **can** add, remove or rearrange columns, but they can't save the modified configuration as a new version of the view. They can use the **Save As** link to create a new view with the modified configuration.

Changing permissions

()

If you have Manage access to a view, you can modify its permissions on the Sharing tab of the view details dialog.

View Details			
View: Epic Tracker Access: Manage - you can change all properties of this view			
Properties Sharing Associations Advanced Delete			
Not shared Make Public			
Who can Use : All who can Update Include: Everyone \checkmark Add			
Who can Update : All who can Manage Include: Everyone > Add			
Who can Manage : Owner and Jira administrators Include: Everyone > Add			
< Back to View List	Close		

For each level of access, you can define categories of users who have this type of access:

- Nobody
- Specific user groups
- Specific roles in specific projects
- Everyone (including anonymous users)

Private and Public Views

⁽i) Higher-level access implies all lower-level access. So everyone who can Manage a view, can also Update and Use it - there is no need to add those users at all three levels!

When a view is not shared with anyone, it's called a **private view**. You can quickly make a view private by clicking the **Make Private** link – this will remove all permission assignments.

When everyone is given at least Use permission for a view, it is called a public view. You can quickly make a view public by clicking the Make Public link on the the Sharing tab and also in the Views menu – this will give Use permission for that view to everyone.

A You need to have global Create Shared Objects permission to be able to share views.
