Associating Views with Structures

Users with **Control** access to a structure can associate particular views with that structure. These views will appear in the **Associated Views** section of the Views menu when that structure is used.

> ⓘ Jira administrator can also specify global default view settings, which define associated views for structures that don't have customized view settings.

To view which structures a view is associated with, or to associate a view with the current structure, open the Manage Views dialog and locate the view to associate. Click **View Details** and select the **Associations** tab.

To associate the view with the current structure, click the **Add to the current structure's views...** link. If you have Manage access for the structure, this will open the View Settings for the structure and add the current view. Scroll to the bottom of the page and click **Apply**.

> ⓘ View settings (associations between a view and a structure) are a property of the structure, not the view. The **Associations** tab on the View Details dialog is provided for convenience.
