

Structure Developer's Guide

Structure for Developers

Structure app provides APIs that allow you to access structures, integrate your add-on with Structure and extend Structure functionality. Here are the typical use cases:

Custom Development

You customize JIRA for your customer or employer, and you need to integrate Structure with some other in-house system – see [section about integrating plugins](#) and [Java API reference](#).

Plugin Integration

You have your own great JIRA app, or plan to create one, and you'd like to use the issue hierarchy provided by Structure – see [Accessing Structure from JIRA Plugin](#).

Extending Structure

You'd like to extend Structure, adding functionality to the plugin itself – read documentation about [extending Structure functionality with additional plugins](#).

Remote Access

You need to get or change issue hierarchy remotely from some automated scripts or a client application – read about [Accessing Structure Data Remotely](#) and [Structure REST API](#).
