

# Transformations

As you work with a structure, sometimes you may want to reorganize the issues you are seeing, so that you can focus on the most important ones. The simplest example of this is [Filtering](#) and Sorting. For example, you may want to see only issues assigned to you sorted by progress.

These are the two examples of the **Transformations** functionality. With transformations you can locally adjust the structure without changing it for everyone else. All other users will see this structure without these transformations applied.

## Available Transformations

Transformations use the same type of functions as [generators](#). The main difference is that the transformations can only be applied to the whole structure (while generators can be inserted under some folder or under a manually added issue) and you cannot use Insert generators as you already have a set of issues to work with. You can use the following transformations:

- Filter
- Sort
- Group
- Extend

For more details on how they work, please check the documentation on [Generators](#).
