

Structure 3.2.1 Release Notes

5th of July 2016

Structure 3.2.1 is a bugfix release based on Structure 3.2.

[Download the Latest Version](#)
[Structure on the Atlassian Marketplace](#)

1. Patch Release

If you are using Structure 2, we encourage you to read [Structure 3.0 Release Notes](#) – a lot has changed in Structure 3!

This is a patch release based on Structure 3.2. We have addressed the following issues:

- Fixed: cannot edit generators and folders after restore.
- Fixed: impossible to add new items after restore (Oracle, Postgres).
- Fixed: default view settings are not restored.
- Fixed: link extender doesn't react to new issues with links.
- Fixed: groupers with a level setting react incorrectly to generator and structure changes.
- Fixed: filters with a level setting remove everything on lower levels.
- Improvement: optimize synchronizer audit log table.

Upgrade is recommended to all Structure users.

2. Installation

If your JIRA server does not have Structure yet, the installation is simple:

1. Download and install Structure add-on, either from Atlassian Marketplace or from [Download](#) page. Pick the correct version based on your JIRA version!
2. When Add-on Manager reports about successful installation, click Get Started to visit a page with important guidance for the JIRA administrator. You may want to also check out the user's Get Started page, available under "Structure" top-level menu.
3. Monitor `catalina.out` or `jira-application.log` for log messages from Structure.

3. Upgrade

- If you're upgrading from version 2.11.2 or earlier, please read [Structure 3.0.0 Release Notes](#).
- If you have installed Structure 3 beta or release candidate, please read [Structure 3.0.0 Release Notes](#).

Upgrade procedure from versions 3.0.x is simple:

1. Consider backing up JIRA data. Use **Administration | System | Backup System**. Starting from version 3.0.0 Structure data can be backed up together with JIRA data. (If you have a large instance and have proper backup strategy in place, you may skip this step.)
2. Install the new version of the plugin.
3. Monitor `catalina.out` or `jira-application.log` for warnings or errors.
