# Changing Permission to Create New Structures

By default, any logged-in user with access to Structure can create new structures of their own. However, you can restrict this ability to one or more user groups.

To select who can create new structures:

1. Navigate to **Administration | Structure | Configuration**.
2. Click **Select Who Can Create Structures**.
3. Select whether new structures can be created by **Anyone with access to Structure** or by **Users in selected groups/roles**.
4. In the latter case, change the **selected groups/roles** list by selecting second radio button and use **Add Group/Role** section to add one or more required user groups or project roles. To set up required property, use drop-down selectors to choose either **Group** or **Project** option, then choose required group name or project/role combination and press **Add** button to add it to the list. If **project** is set to "Any", this means that user should be in specified role for any of structure-enabled projects.
5. You can remove permission option by clicking trash can icon on the right of the option.
6. Click **Apply** when done or **Cancel** to dismiss your changes.

> The user also needs general access to Structure to be able to create new structures.

> Users who have *JIRA Administrators* global permission are always allowed to create new structures.

> Structure plugin maintains a cache of users permissions with regards to each structure. In most cases, the cache is recalculated automatically, but in some cases Structure plugin may miss a change in a user's groups or roles. The result could be that the changed permissions take effect several minutes later (but only with regards to Structure Permissions). A user can force the cache to be recalculated by doing **hard refresh** from the browser. Typically, it's done by holding **Ctrl** or **Shift** or both and clicking the **Refresh** button.
