

Table Search

After you found a set of bugs you can further search for specific words or phrases in this set using the **Table Search**.

To search for words or phrases in a table:

1. Select the table using the tab control.
2. Press **CTRL + SHIFT + F** or select **Search | Find in Table**.
3. In the table search control which opens specify text to search for.

4. Select the required check boxes:
 - a. Case Sensitive. Select this check box to run a case sensitive search.
 - b. Regexp. This is an advanced-user feature which allows to use Perl-compatible regular expressions for the search. You can find more information on regular expressions [here](#) .
 - c. Filter. When selected, the table will only show the bugs which contain the specified text value.
5. Press **Enter** to see search results. The found text is highlighted with the green color.
6. Use the **Next** and **Previous** arrow buttons to navigate between the found results,
