Deleting Gantt Configurations

You can delete an existing Gantt configuration from the Manage Configurations dialog.

You need to be the owner of the configuration or a Jira administrator to be able to delete a Gantt configuration.

If Gantt configuration is in use, you can delete it, but you will need to select a replacement configuration.

> There are some limitations when deleting a configuration and replacing it with another one.
>
> 1. The replacement configuration should have the same visibility as the one being removed. So, for example, it is possible to replace a *public* configuration with another *public* configuration only.
> 2. You need to have Control access to all the structures that are using the configuration being deleted.
