

Setting Global Permissions

Global permissions determine which Jira Cloud users have access to Structure Cloud. This is at the app level, so users without access will not be able to view any structures, nor will they see the Structure link in their Jira navigation bar.

More granular access controls (assigning view, edit or control permissions), are done at the individual structure level, using [Manage Structure](#).

To enable/disable Structure Cloud access for users, Jira Cloud admins must go to the **Settings | Systems | Global permissions** and scroll down to the **Access to Structure Cloud** section.

User groups with access to Structure Cloud are listed here:

- To review or edit a group, click the corresponding **View Users** link.
- To remove a group, click **Delete**.

- system-administrators
[View Users](#) [Delete](#)
- administrators
[View Users](#) [Delete](#)
- Structure access
[View Users](#) [Delete](#)
- site-admins
[View Users](#) [Delete](#)
- atlassian-addons-admin
[View Users](#) [Delete](#)

Only Jira Cloud admins can change global permissions.

By default, the **atlassian-addons-group** should have "Browse users and groups" permission - this is required to access Structure. If this permission has been removed, go to the Grant Permission section at the bottom of the Global permissions screen and add the following permission:

- **Grant:** Browse users and groups
- **Group:** atlassian-addons-admin

Project Permissions

In order to view issues from specific projects within Structure, under Project settings, make sure 'Project Role (atlassian-addons-project-access)' has Browse Projects permission.

BP permission scheme

Project permissions define who can access a project and what they can do (create and comment on issues, for example). To set security levels for individual issues, [upgrade your plan](#).

For projects created in Jira Core and Software Free, any logged-in user is an admin. If you changed to a Free plan, permissions are locked and not editable. [Learn more](#)

Note: Permission schemes may be used by multiple projects. Modifying a scheme will affect any project its associated with.

Project Permissions

Permission	Users / Groups / Project Roles
Administer Projects Ability to administer a project in Jira.	Project Role (atlassian-addons-project-access) Application access (Any logged in user)
Browse Projects Ability to browse projects and the issues within them.	Project Role (atlassian-addons-project-access) Application access (Any logged in user)
