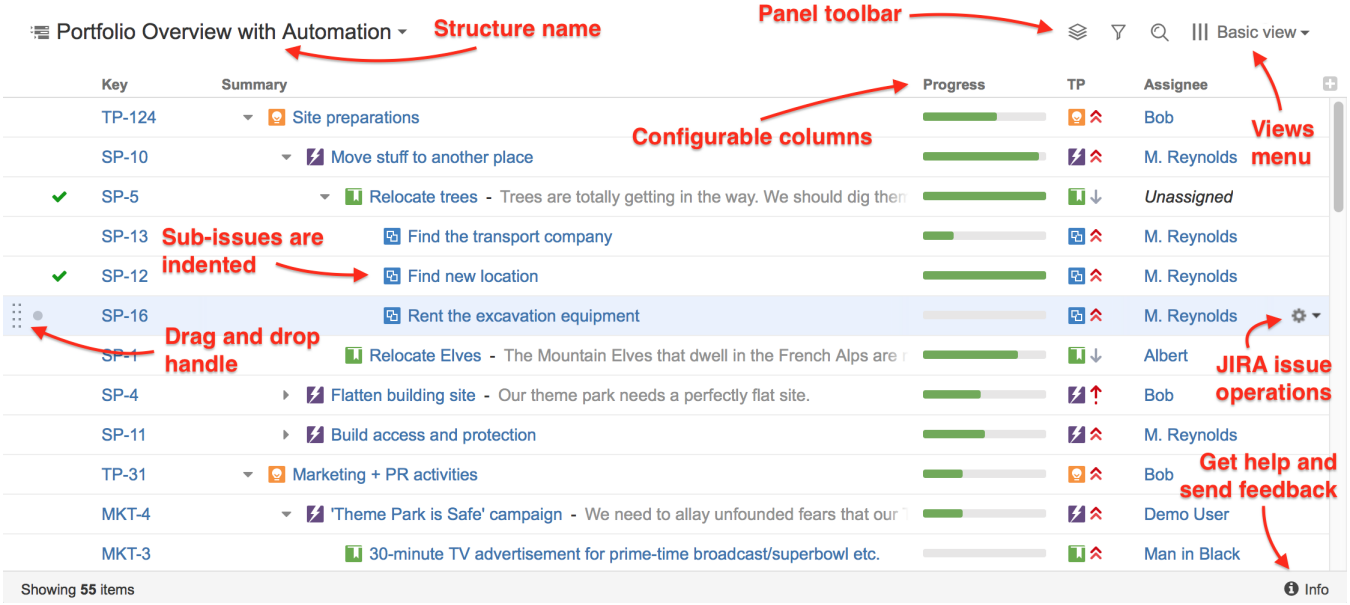
Structure Widget Overview

Structure displays issues as a hierarchical list. You can view as much or a little information about each item, by adding or removing columns to the Structure panel (or by selecting one of the predefined views).



Within the Structure widget, you can:

- Rearrange issues and adjust their position within the hierarchy
- Edit issues
- Perform Jira issue operations
- Search and filter issues
- Switch to a different structure

To learn more about performing each of these actions, see Moving Items within Structure and Working with Issues.

> Structure widget is displayed on the Structure Board, Issue Page and in other places in JIRA.
