

Structure 3.3.1 Release Notes

22nd of September 2016

Structure 3.3.1 is a patch release based on Structure 3.3.

[Download the Latest Version](#)
[Structure on the Atlassian Marketplace](#)

1. Patch Release

If you are using Structure 2, we encourage you to read [Structure 3.0 Release Notes](#) – a lot has changed in Structure 3!

This is a patch release based on Structure 3.3. We have addressed the following issues:

- Fixed: exception during Structure restore from version 2.x.
- Fixed: dropdowns on Agile boards stop working after clicking on an issue key.
- Fixed: Structure disappears on an issue page after clicking on an issue key.
- Fixed: dropdowns stop working after issue page refresh.
- Fixed: exception in DefaultWorkflowSchemeManager.
- Fixed: incorrect initialization leading to "dangerous call" StructureRuntimeException.
- Fixed: slow loading of Agile boards based on structure() function.
- Fixed: warning in the logs about Inserter/Extender Duplicates Generator.

Upgrade is recommended for all Structure users.

2. Installation

If your JIRA server does not have Structure yet, the installation is simple:

1. Download and install Structure add-on, either from Atlassian Marketplace or from [Download](#) page. Pick the correct version based on your JIRA version!
2. When Add-on Manager reports about successful installation, click Get Started to visit a page with important guidance for the JIRA administrator. You may want to also check out the user's Get Started page, available under "Structure" top-level menu.
3. Monitor `catalina.out` or `jira-application.log` for log messages from Structure.

3. Upgrade

- If you're upgrading from version 2.11.2 or earlier, please read [Structure 3.0.0 Release Notes](#).
- If you have installed Structure 3 beta or release candidate, please read [Structure 3.0.0 Release Notes](#).

Upgrade procedure from versions 3.0.x is simple:

1. Consider backing up JIRA data. Use **Administration | System | Backup System**. Starting from version 3.0.0 Structure data can be backed up together with JIRA data. (If you have a large instance and have proper backup strategy in place, you may skip this step.)
2. Install the new version of the plugin.
3. Monitor `catalina.out` or `jira-application.log` for warnings or errors.
