Extend Generators

When opened in a viewport, the user will be redirected to: https://wiki.almworks.com/documentation/structure/latest/cloud/extend-generators-130882640.html.

Extend generators allow you to add issues to a structure based on Issue Links and Sub-task relationships. The following Extenders are available in Structure Cloud:

- Linked Items Extender — Pulls in issues that are linked to issues already in the structure.
- Sub-task Extender — Pulls in sub-tasks to issues already in the structure.
- Issues Under Epics Extender — Pulls in issues belonging to epics already in the structure.
- Team-managed Project Hierarchy Extender — Pulls in issues under epics and/or sub-tasks under issues for Team-managed projects.
- Child Issues (Advanced Roadmaps) Extender — Pulls in child issues using the Parent Link field from the Advanced Roadmaps for Jira add-on (if installed).

Always Up-To-Date

Generators run every time you open a structure, so the list of issues added by the Extend generator is always up-to-date.

Additionally, if issues change as you work with the structure, they will be added, removed or moved accordingly, based on the rules of your Extend generator.
