

Structure Permissions

When opened in a viewport, the user will be redirected to: <https://wiki.almworks.com/documentation/structure/future-cloud/data-center-and-server/structure-permissions-172164024.html>.

To edit a structure's permissions, open [Manage Structure](#), locate the structure you want to manage and click the **config** link. This will open the structure's configuration screen.

Edit Structure

Name*

Getting to Know Structure

Description

Owner

Jaramy Conners

Permissions

View view the structure but cannot make changes.

+ Add people

No people with **View** access have been added. Use + Add people button to add some.

Edit view the structure; rearrange, add and remove items in the structure. But cannot create or modify generators.

+ Add people

No people with **Edit** access have been added. Use + Add people button to add some.

Edit generators full edit access to the structure, including modifying generators.

+ Add people

No people with **Edit generators** access have been added. Use + Add people button to add some.

Control view, edit and configure the structure - including changing structure permissions.

+ Add people

No people with **Control** access have been added. Use + Add people button to add some.

Update

Update and Open

Permissions

You can set the following permissions for your users:

- **View** - these users can view the structure but not make any changes.
- **Edit** - these users can view the structure, as well as rearrange, add or remove issues and folders from the structure.
- **Edit generators** - these users can do everything Edit users can do, and they can modify generators.
- **Control** - These users can do everything Edit generator users can, and they can adjust a structure's configuration and permissions. *Note: Jira admins can manage all structures.*

Once you have made your changes, click **Update** to return to the Manage Structures page or **Update and Open** to open the structure.

 In Structure Cloud, individual permissions are based on the highest level of permissions for each user. This means, if a user is part of two groups, one with View permissions and one with Edit permissions, that user will have Edit permissions (the higher of the two). This is different from the way permissions are assigned in Structure Server, so please be careful.
