Comparison to Structure for Jira Server, Data Center and Service Management

When opened in a viewport, the user will be redirected to: https://wiki.almworks.com/documentation/structure/latest/cloud/comparison-to-structure-for-jira-server-data-center-and-service-management-130884848.html.

Users who are familiar with current versions of Structure for Jira Server, Data Center or Service Management (formerly, Jira Service Desk) will notice some differences in Structure Cloud. Additionally, there are some features that are currently not available in Structure Cloud. Don't worry. We are working to bring many of these features to Structure Cloud as soon as possible.

- Some Automation features are currently missing:
    - At this time, not all of the generators are available. See more in Automation
    - Currently Link Extender is the only generator that supports manual reordering - the ability to change field values or rearrange generated content by dragging issues from one generated group to another
- Structure extensions - Currently, only Structure.Gantt is available for Structure Cloud. Structure.Pages and Structure.Testy are not available at this time
- Structures are not available on Jira project and issues pages at this time
- Some issue fields cannot be shown in Structure columns
- Structure permissions:
    - It is not possible to define or limit which projects can be used in Structure. Currently, issues from all projects are available.
    - It is not possible to define who can create structures or edit generators. All users with access to the app can create/edit structures.

ⓘ **Migration from Jira Server/DC to Jira Cloud**

If you're currently using Structure on Jira Server or Data Center, learn about your options for migrating to cloud: Migration from Jira Server or Jira Data Center

---

The following Structure Server/Data Center/Service Management features are currently not available in Structure Cloud:

- Custom columns:
    - Formula
    - Work Logged
    - Notes
- Cloning of existing structures
- Bulk issue editing/cloning
- Confluence Macro
- Perspective sharing
- Transformations (and their dependent features):
- Search in structure
- Quick transformations
- Sorting by columns
- Pinned items
- Inline issue creation
- Manual adjustments in automated structures
- Import / export / migrate
- History of changes inside a structure
- S-JQL (`structure()` function in JQL)
- Issue actions menu (see Jira Actions Column)
- Fullscreen mode
- Default structure
- Favorite structures
- Search for structures by owner / permissions
- Effectors
