

Text Query Inserter

The Text Query Inserter allows you to add issues based on the text contained within their summaries.

Insert Text Query

Runs As

 M. Reynolds

Text Query

Limit

Maximum number of issues to insert (leave empty for no limit)

Apply

Cancel

In the image above, this query will search for any issues containing the term "Team A" and add it to the structure.

Depending on your query, this could result in a large number of issues being added. You can limit that number by adjusting the **Limit** field. By default, the limit is set at 1,000 issues. If you don't want to limit the number of issues, simply leave this field blank.

Once you've entered your query and set your Limit, click **Apply**. The inserter should now appear as a new row in your structure, with the added issues placed below it.

Text Query Inserter		Σ Story Points	Σ Time Spent	Progress	TP	Assignee	Status
	Text Query Inserter	207	3d 2h	<div><div></div></div>			
+ Insert issues: Team A							
STMA-21	 Team A Story 20			<div><div></div></div>	 	Unassigned	<button>TO DO</button>
STMA-16	 Team A Story 16	15		<div><div></div></div>	 	Unassigned	<button>TO DO</button>
STMA-15	 Team A Story 15	6		<div><div></div></div>	 	Unassigned	<button>TO DO</button>
STMA-14	 Team A Story 14	13		<div><div></div></div>	 	Unassigned	<button>TO DO</button>

When to Use the Text Query Inserter

The Text Query Inserter is particularly useful if your company uses specific naming conventions, or if you need to find similar issues across multiple projects.

For example:

- You need to track issues related to a specific application, which may be used for several projects
- You need to track issues involving a specific partner or client
- Your team uses specific terms to designate an internal issue property

You can expand and customize your results using the [Extend](#), [Filter](#), [Sort](#) and/or [Group](#) generators.
