Structure 5.4.1 Release Notes

ⓘ **5th of July 2019**
Structure 5.4.1 provides a number of minor fixes.

Download from Archive
Structure on the Atlassian Marketplace

1. Patch Release

This is a small patch release based on Structure 5.4.0. It addresses the following issues:

- Fixed: Screen remains dark after making a status change in the Issue Details panel.
- Fixed: Empty rows appear in the structure when using a combination of Filter and Group transformations.
- Fixed: Summary data is lost when moving from the Create Issue dialogue to the Create Issue panel.
- Fixed: Cannot share Structure.Gantt chart perspectives.

Upgrade is recommended for all customers using Structure 5.4.0.

2. Installation

If your Jira server does not have Structure yet, the installation is simple:

1. Download and install the Structure add-on, either from Atlassian Marketplace or from our Download page. Pick the correct version based on your Jira version!
2. When the Add-on Manager reports a successful installation, click Get Started to visit a page with important guidance for the Jira administrator. You may also want to check out the user's Get Started page, available under the "Structure" top-level menu.
3. Monitor `catalina.out` or `jira-application.log` for log messages from Structure.

3. Upgrade

⚠ If you're upgrading from version 2.11.2 or earlier, please read Structure 3.0.0 Release Notes.

The upgrade procedure for versions 3.x to 5.4 is simple:

1. Consider backing up Jira data. Use **Administration | System | Backup System**. Starting from version 3.0.0, Structure data can be backed up together with Jira data. (If you have a large instance and have a proper backup strategy in place, you may skip this step.)
2. Install the new version of the plugin.
3. Monitor `catalina.out` or `jira-application.log` for warnings or errors.
