

# Nginx Configuration Option

Some Nginx proxy users reported that adding the following block directive is an effective workaround for addressing the missing CORS headers issue.

Please replace **XXXX** with your actual Confluence domain name:

```
location ~* \.(eot|ttf|woff|woff2)$ {
    add_header Access-Control-Allow-Origin "https://confluence.XXXX.com";
    try_files $uri @jira;
}
location / {
    try_files $uri @jira;
}

location @jira {
    proxy_pass http://localhost:8080 ;
    proxy_read_timeout 180s;
    proxy_http_version 1.1;
    proxy_redirect off;
}
```
