

Sort Generators

Sort generators allow you to order your structure based on a Jira attribute, Structure attribute, or Agile rank. They can also be used to allow manual sorting for JQL-generated structures.

While sorting is possible from within the structure itself (by clicking the row you want to sort by), the Sort generator allows you to fully customize the ordering of items within your hierarchy - the top level can be sorted by one attribute, while lower levels are sorted by another. Or you can add several different sorts using a manual level range.

 Placement matters. Generators only affect issues beneath them, so if you want to sort the entire structure, place the generator at the very top (by selecting the structure's name in the top row). If you place it anywhere else, it will only sort the items beneath it.

Customize Your Sort

Most of the options under the "Sort By..." Automation are applied the moment they are selected, and you will not be asked to set parameters for the sort. However, you can still customize a Sort generator by locating it within your structure and double-clicking its summary.

Sorted Structure ▾ 🏠 📁 🔍 📅 Planning ▾

Key	Summary	TP	Due Date	Fix Version	Assignee	Original Estimate	Remaining Estimate	Σ Remaining Estimate	
Sorted Structure									19w 1d 6h
Add issues belonging									
Sort by Assignee									
Insert issues: Project									
SPR-9	SAFe Epic 9				Bob			1w 1d	
STMB-4	Team B Story 4				Albert	2d	2d	2d	
STMB-9	Team B Story 9				Bob	5h	5h	5h	
STMB-7	Team B Story 7				M. Reynolds	1d 7h	7h	7h	
STMB-6	Team B Story 6			1.0 - Team	Nah Duo	1d 2h	1d 2h	1d 2h	

From the **Sort by Attribute** dialogue, you can select a new attribute to sort your structure by, change the level(s) within your hierarchy where the sort is applied, and/or change the order of the sort.

The dialog box titled "Sort by Attribute" is shown over the table. It contains the following settings:

- Runs As: M. Reynolds
- Order By: Assignee
- Sort Levels: All levels
- Sort Direction: Ascending, Descending

Buttons for "Apply" and "Cancel" are at the bottom right.

Sort generators can be applied to all levels, the current level only, or to a custom level range.

 To customize these values right away, in the **Automation | Sort by...** menu select **Attribute**.

Level-based Sorting

If you want different levels within your hierarchy sorted by unique parameters, simply add multiple Sort generators, each with different Manual Sort Levels.

For example, if you need to quickly assess the progress of sprints across your organization, you could [insert](#) issues from all active projects (and use [Extend ers](#) as appropriate), and then apply the following sorts:

- Sort by Project - Applied to the Top Level
- Sort by Sprint - Applied to the Second Level
- Sort by Progress - Applied to the Third Level

See [Generator Scope](#) to learn more about customizing levels.

If your hierarchy has some levels you don't want sorted, or multiple levels you want sorted by the same attribute, that's okay - just set a specific range for each type of sort.

Rank Sort

If you use Sort by Rank, Structure can update the Rank as a user moves issues up and down inside the structure.

Manual Reordering Generator

If your structure was built using a [JQL Query Inserter](#), by default you will not be able to reorder issues within the structure. The **Manual Reordering Generator** allows you to move issues up or down, provided they remain at the same level within the hierarchy.

To move items between levels, you can enable [Manual Adjustments](#).
