[Structure on the Atlassian Marketplace](#)

## 1. Patch Release

This is a patch release based on Structure 5.6.1. It provides:

- Compatibility with Jira 8.4+.
- Fixed: Epic Link colors now appear correctly in gadget.
- Fixed: "Archived" label appeared next to search type when a search is opened.
- Fixed: After collapsing and expanding structure levels, user could not select status for the Structure.Testy add-on.
- Additional bug fixes.

Upgrade is recommended for all customers using Structure 5.6.x

## 2. Installation

If your Jira server does not have Structure yet, the installation is simple:

1. Download and install the Structure add-on, either from Atlassian Marketplace or from our [Download](#) page. Pick the correct version based on your Jira version!
2. When the Add-on Manager reports a successful installation, click Get Started to visit a page with important guidance for the Jira administrator. You may also want to check out the user's Get Started page, available under the "Structure" top-level menu.
3. Monitor `catalina.out` or `jira-application.log` for log messages from Structure.

## 3. Upgrade

If you're upgrading from version 2.11.2 or earlier, please read [Structure 3.0.0 Release Notes](#).

The upgrade procedure for versions 3.x to 5.6 is simple:

1. Consider backing up Jira data. Use **Administration | System | Backup System**. Starting from version 3.0.0, Structure data can be backed up together with Jira data. (If you have a large instance and have a proper backup strategy in place, you may skip this step.)
2. Install the new version of the plugin.
3. Monitor `catalina.out` or `jira-application.log` for warnings or errors.

## 4. Enterprise Deployment Notes

Structure 5.6.2 does not introduce changes that could affect performance or would justify additional load and stress testing for Enterprise deployments.
