

Creating New Confluence Pages in Structure

To create a new Confluence page from Structure:

1. Select an item in your structure, under which the page should be added.
2. Open the Add menu and select **New Page**.

3. Specify the page name, select the Confluence Space where the page should be created and select the template for the page.

A screenshot of the 'New Page' dialog box. It has a title field containing 'My New Page'. On the left, there is a sidebar with options: 'Issue', 'Folder', 'Memo', and 'Page' (which is selected and highlighted in blue). To the right of the sidebar, there are two dropdown menus: 'Space*' with 'ALM Labs' selected, and 'Template*' with 'Blank page' selected. A blue 'Done' button is located at the bottom right of the dialog.

Page creation using templates and blueprints is supported for Confluence version 5.9.1 and higher; on older versions, only Blank page is available.

4. Click **Done** to create the page.
