

Issues under Pages Extender

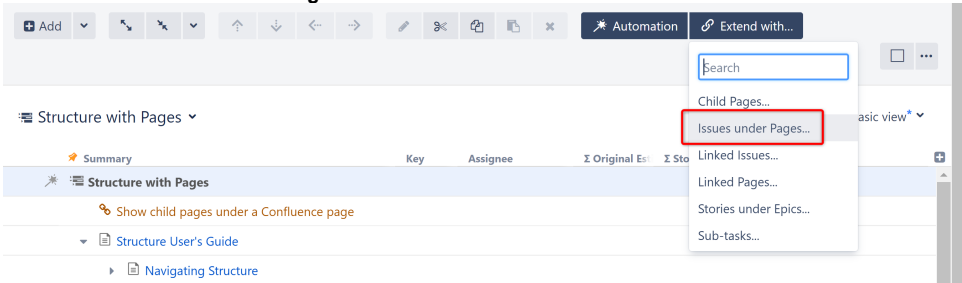

Structure can automatically insert issues linked to Confluence pages already in your structure.

Structure with Pages

Summary	Key	Assignee	Σ Original Est	Σ Story Points
Structure with Pages			3w	
Show issues under linked Confluence pages				
Structure Quick Start Guide				
Story 1	STMB-31	Unassigned		
Story 3	STMB-33	Unassigned		
Structure User's Guide				
Story 2	STMB-32	Unassigned	1w	1w

To insert issues linked to pages:

- 1. Select the top line of your structure (where the structure name appears), to ensure the automation is applied to all pages in the structure.
- 2. Click the Automation button to enter **Automation** editing mode
- 3. Select **Extend > Issues under Pages...**

Moving issues between pages in Structure will update the links. If this is undesirable, disable editing via Structure in the **Issues Under Pages Extender** settings.

You can add both the **Linked Pages Extender** and **Issues Under Pages Extender** to the same structure to get a complete view of links between pages and issues.
