

System Requirements

The following are additions to [JIRA Requirements](#) imposed by the Structure.

Browsers

Structure Plugin is compatible with the following browsers:

Browser	Versions	Known to NOT work
Mozilla Firefox	3.6+	3.5
Chrome	5+	
Internet Explorer	7+	6
Safari	5+	
Opera	10+ (not regularly tested)	

Server Requirements

- Structure needs at least additional 100MB of disk space on the server.
- It needs JIRA process to have write permissions to JIRA home directory to create *structure* sub-directory automatically.
 - Alternatively, you can create *structure* sub-directory under JIRA home manually and give JIRA process permissions to write to it.

Non-conforming systems

With regards to systems that don't conform to JIRA requirements and Structure requirements: while we sometimes know that a specific configuration doesn't work, more often it's grey area so feel free to try and let us know.
