

Creating a New Synchronizer

Structure comes with a number of bundled [synchronizers](#), but you can add another synchronizer to the system, allowing Structure users to install it on structures and run export / import.

1. Implement StructureSynchronizer

Create your implementation of [StructureSynchronizer](#) interface.

Use [AbstractSynchronizer](#) or [AbstractIssueListeningSynchronizer](#) as the base class.

2. Define structure-synchronizer Module

Add [Synchronizer Module](#) module to your `atlassian-plugin.xml`, referring to your implementation of the `StructureSynchronizer`.

3. Test Thoroughly

Test how your synchronizer works when other synchronizers are also installed onto the same structure.
