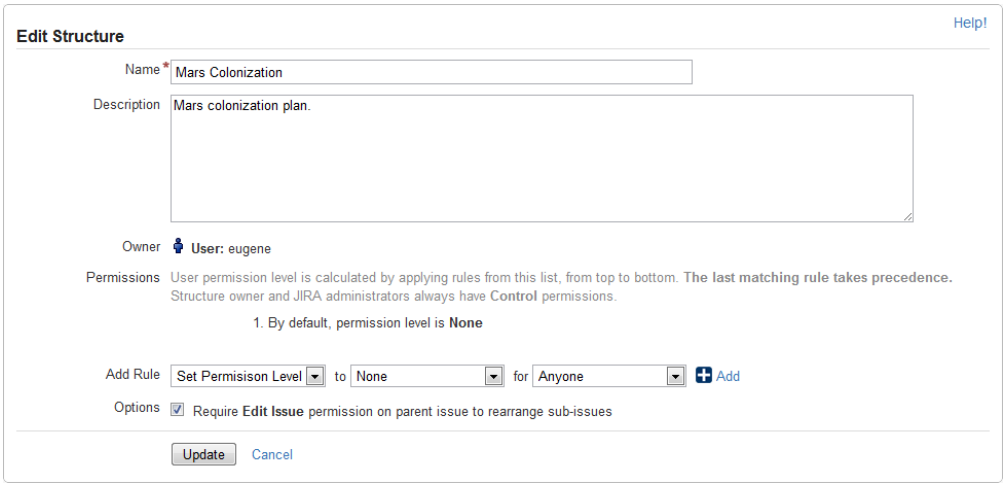
Structure Details

Every structure has the following parameters:

Name (*required*)	Name is used to identify the structure in the drop-downs like the *Structure* menu in the top navigation bar.
Description	Used to describe the meaning of the structure to the users.
Owner	The user who has created the structure. You can't change the owner.
Permissions	Define who can view, edit or configure the structure. See Structure Permissions for details.
Require Edit Issue Permission flag	When *Require Edit Issue permission on parent issue to rearrange sub-issues* flag is set, additional permission constraints are applied to figure out what changes is the user allowed to make. See Structure Permissions for details.



You can specify structure details when Creating New Structures and when Editing Structure Details.
