Structure Resource - GET

Request

```
GET $baseUrl/rest/structure/1.0/structure/$id
```

Returns basic data about a structure.

Parameters:

$i d	the ID of the structure

Response

```
{
    "id" : 109,
    "name" : "My Pretty Structure",
    "description" : "This is a structure that I like very much.",
    "readOnly" : true,
    "editRequiresParentIssuePermission" : true,
    "error" : "Something terrible happened"
}
```

Response Fields:

id	the ID of the structure
name	the name of the structure
description	the description on the structure
readOnly	true if the user has only READ access level to the structure (not present in the response otherwise)
editRequiresParentIssuePermissio n	true if the Require Edit Issue Permission on Parent Issue flag is set on this structure
error	error text, if any error happened - if the user has no access to the structure, for example
