

## Count Leaves Column

The Count Leaves column allows you to quickly see how many sub-items of an issue are at the last level of the hierarchy (they have no sub-items of their own). This is particularly useful when you have organized issues using [Group generators](#) or [folders](#) and you need a count of just the issues themselves.

Bottom-Up Automation

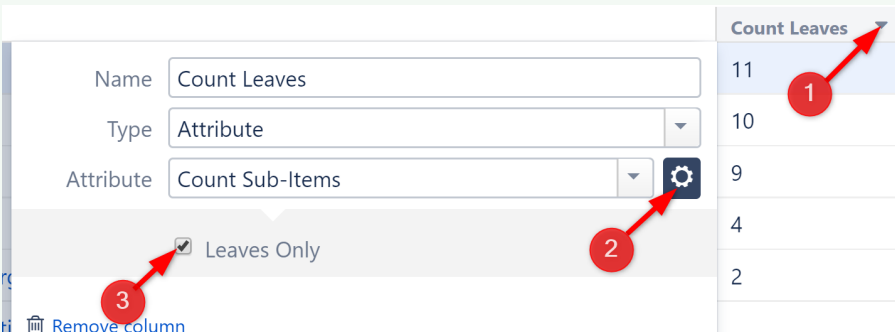

Compact

Summary	Count Sub-Items	Count Leaves
HP Sprint 4	13	9
Albert	1	1
Additional Story 2		
Anna M.	2	2
Additional Story 3		
Additional Story 4		

Notice in the example above that HP Sprint 4 has 13 sub-items, but only 9 leaves. The Count Leaves column allows you to omit group items (in this case, the Assignee groups) and look just at the number of issues in the last level of the structure's hierarchy.

*See also:* [Count Sub-Items Column](#)

 You can toggle between Count Sub-Items and Count Leaves. Open the column configuration, click the settings icon and check/uncheck **Leaves Only**.

The screenshot shows the 'Count Leaves' column configuration panel. It includes fields for 'Name' (Count Leaves), 'Type' (Attribute), and 'Attribute' (Count Sub-Items). A settings gear icon is located next to the 'Attribute' field. Below these fields is a toggle switch for 'Leaves Only', which is currently checked. A 'Remove column' button is at the bottom left. To the right of the configuration panel is a table with a header 'Count Leaves' and rows containing the values 11, 10, 9, 4, and 2. Red callout numbers 1, 2, and 3 point to the table header, the settings gear icon, and the 'Leaves Only' toggle switch, respectively.
